

Work in Water Training

for municipal utility and HR staff

December 4, 2019 | Auburn, Nebraska

About the Work in Water Training

Water utilities across the U.S. report that there is an inadequate pool of interested and qualified employees to meet present and future replacement needs for operators and other utility staff. This water workforce gap is not only a headache for managers, but a public safety concern.

Learn How to Connect with Students to Explore Water Careers and Recruit the Next Generation of Talent!

Attend the free Work in Water Training Session on Dec. 4 in Auburn, NE, where facilitators will lead you step-by-step through lesson and activity plans that will help you engage and educate students about where their water comes from, how their water is treated for drinking, and what happens to wastewater. You will also learn how to get the next generation aware and excited about water career opportunities.

Attendees will be inspired to adapt the Work in Water methodology for their own utility or community to pilot new efforts in support of the water workforce.

Plus! Utilities that participate in this training are eligible for mini-grants to cover costs associated with hosting their first Work in Water program!
